WELCOMING NOTE

CITIES is an annual event hosted by the Department of Urban and Regional Planning (here on after referred to as The Department), ITS. Ever since the first time it was held in 2005, CITIES has covered a broad range of topics on the spatial sciences from city morphology to smart city application.

This year's topic is covering the broader theme from past to future, from identity to the technology intervention in the city. The basic reason for this theme comes from the idea that the city must have a connection to the identity and their future development. We travel the world because we want an experience that we can't get in our origin city, we seek for originality, value as well as identity. On the other hand, we can not always live in the past, we need to be future-oriented to accommodate the development in the city we live in. The only way to win this is bridging between the past and the future.

Sometimes we forget we have history to be accommodated in our city to enhance our unique value while the technology development grows so fast. And mostly we forget that history is not always in the past, as today we make history for our future. It is our choice as an urban planner what legacy we will build for our city in the future.

Chairperson CITIES 2020

INTRODUCTION

Prof. (Emeritus) Ken Taylor –
The Australian National
University (ANU)

Prof. Johannes Widodo – The
National University of Singapore
(NUS)

Prananda Navitas, Ph.D –
Institut Teknologi Sepuluh
Nopember (ITS)

The world has changing rapidly including Asia Pacific (AP) that is now the leading region of economic growth in the world and is enduring 5G & IoT digital revolution across the region according to the Market watch report in 2019. The terminology Asia Pacific has lead the main theme in the CITIES 2020 caused by its strategically location, culture connections and also economic cooperation among them. ESCAP and UN Habitat have been highlighting the shifting in the AP cities in the future that caused by the demographic pattern changing, the induction of technology in the daily life as well as in the ecological contexts. One of the key answer to sustaining in the future is when the urban and territorial planning lays a foundation in the AP region. ESCAP and UN Habitat have also highlighting that the AP countries has advantaged in the diverse value and social economic changes that embodied on their inherited cities that been spreading in the big cities across AP region. In order to sustaining the cities, the AP region need to accelerate their economic and infrastructure growth in the way that will not hurting their legacy and societies. So the theme “Bridging the Past and The Future of Urban Landscape (Cities) in Asia Pacific” in this conference is trying to gather new insight, best practices, policy as well as lesson learnt towards sustainable future AP and also the preservation of what they value in the past. The preservation of cultural heritage assets is aimed at protecting the built expressions of culture, of military, of economic, and religious forces to benefit the present and future of cities. For over 50 years, the integral and holistic approach to heritage and urban development has been highlighted in every heritage-related cultural policy document, stressing the need to balance the benefits of socio- economic and urban development with the preservation of cultural heritage.

Authors are invited to submit their papers with the following topics (but not limited to):

- 1. The Inherited City: Urban Heritage Landscape:** The management of conflict between the preservation of the character of existing historic town and change
- 2. Urban Renewal And Regeneration:** Seeking effective urban regeneration strategies to respond to contemporary quality-of-life issues
- 3. Sustainable Tourism:** Creative initiatives in the upgrading of public spaces in and around informal and heritage neighborhoods in cities bring new avenues for sustainable tourism
- 4. Novel And Smart Approaches To Enhancing Urban Infrastructure:** Implementation, as well as investment in and retrofitting of infrastructure to keep up with the demands of the contemporary city; energy and 4.0 issues
- 5. Environmental Sustainability And Adaptations To Climate Change:** Urban-rural integration to provide sustainable solutions based on community, nature-based, innovations and technology approaches

PUBLICATION PARTICIPANT

Submission Options :

1. **International Proceedings** : Scopus Indexed
2. **International Journal**: ISSN, SINTA Indexed, Google scholar indexed
3. **National Journal**: ISSN, SINTA Indexed, Google scholar indexed
4. **National Proceedings**: ISBN, Research gate indexed
